the curriculum and evaluation standards for school mathematics published by the national council of teachers of mathematics in 1989 set forth a broad vision of mathematical content and pedagogy for grades K-12 in the United States. These standards prompted the development of standards-based mathematics curricula. What features characterize standards-based curricula? How well do such curricula work to answer these questions? The editors invited researchers who had investigated the implementation of 12 different standards-based mathematics curricula to describe the effects of these curricula on students' learning and achievement and to provide evidence for any claims they made. In particular, authors were asked to identify content on which performance of students using standards-based materials differed from that of students using more traditional materials and content on which performance of these two groups of students was virtually identical. Additionally, four scholars not involved with the development of any of the materials were invited to write critical commentaries on the work reported in the other chapters.
